

Chronicle Update

Welcome to the first of our newsletters giving you an update on Chronicle Software. We provide professional services and world leading Java libraries to enhance automated trading capabilities for a multitude of global financial services organizations.

Commercial Update

Here at Chronicle, due to significant growth within the business, we have made some additions to our Commercial Team

Technical Update

We have made some significant investment in our product range including support for Java 11 and C++

Support Update

We have extended our support arrangements and now we can offer skilled and experienced support for all our open source software

Commercial Update

We have enjoyed significant growth over the last twelve months acquiring several new customers and new innovative use cases for our suite of software products, to support this and future growth we have expanded our commercial team with two new recruits. Rob Hunt has joined in a Business Development Role and Andrew Twigg has joined in a Sales role

We are also to developing and expanding our product range this includes new Enterprise features in Chronicle Map and Chronicle Queue plus also expanding the languages supported to include C, C++ and Python. In addition we are working on continually improving the latency and throughput performance of our core capabilities

Technical Updates

Java 11 Support

From chronicle-bom 2.17.x, we have support for Java 8 and 11. We are not intending to support for Java 9 and 10 as these at End of Public Updates from Oracle. To support Java 11, a number of JVM internal classes moved or were no longer available. We added mapping to the new classes or wrote replacements where possible.

C++ support

We are adding C++ support for Chronicle Queue v5. This will allow low latency IPC between Java and C++ in an interoperable format. To make testing easier we will have a JNR/FFI wrapper for the C++ library, so we can do back to back tests from Java. C++ is only available via a

Support Update

We have expanded our support offering that enables us to offer skilled and experienced support for all our open source software, this support will provide that peace of mind that you are always able to talk to an expert in the event of any outage saving both time and money
