

# Java Engineer | Customer Focused | Remote, Europe

Chronicle Software, headquartered in the UK, is a distinguished leader in delivering cutting-edge, low-latency solutions to global financial institutions. Our core expertise is in crafting an extensive suite of software libraries and tools, empowering financial firms to process massive data volumes using distributed components efficiently. Our wide-ranging library suite covers messaging, trading, event-driven applications, microservices, among others. A standout feature of our software is its exceptional low latency, making it the top choice for time-sensitive applications and tasks demanding swift processing of substantial message volumes.

Beyond our software offerings, Chronicle Software provides in-depth consulting and services. We collaborate with clients, delving deep into their needs and challenges, to ensure our products seamlessly integrate into their existing systems. Our consistent delivery of reliable, high-performance solutions has solidified our reputation as a trusted partner in the financial services sector.

As Chronicle Software continues its growth trajectory, we are on the lookout for an experienced and proficient developer to become a full-time member of our team. In this pivotal role, you'll establish close ties with our clients, communicate effectively, troubleshoot issues, bolster our internal systems, and contribute to documentation. You'll also have numerous opportunities to gain a deeper understanding of our codebase and play a significant role in its advancement. This position is highly technical, and should an issue arise; your responsibilities will include rectifying bugs and spearheading the development of new features.

## Benefits:

- Write Low Latency Java
- Work with a Java Champion
- Get a good understanding of trading and financial markets.
- Opportunity to visit the UK

- Being able to work on open source and closed source.

#### Responsibilities:

- Support customers in the region through phone, email, and our support portal.
- Efficiently manage and resolve customer issues by employing meticulous troubleshooting and clear communication with both customers and internal resources.
- Develop and maintain a strong understanding of our core software and its underlying concepts.
- Contribute updates to documentation as necessary, ensuring accuracy.

#### Requirements:

- Exceptional written and verbal communication skills in English.
- Proficient experience in troubleshooting and debugging complex software systems.
- Strong problem-solving skills and meticulous attention to detail.
- Minimum of 3 years of IT experience, excellent proficiency in Java (knowledge of C++, Rust and Python would be a bonus).
- A self-learner with a natural inclination and enthusiasm for acquiring new skills and exploring innovative ideas.
- Ability to work independently and collaboratively within a team, effectively managing multiple tasks simultaneously.
- Familiarity with the FIX protocol will be a bonus.

We offer a flexible work schedule and the opportunity to work remotely.
